

What Scientists & Health Professionals Are Saying:

Dr. Neil Riordan: “Stem cells are the repair cells of your body. When there aren’t enough of them, or they aren’t working properly, chronic diseases can manifest and persist. From industry leaders, sports stars, and Hollywood icons to thousands of everyday ordinary people, stem cell therapy has helped when standard medicine failed. Many of them had lost hope.”

Dr. Matthew Brock: “We are seeing remarkable results with this therapy. The theories keep coming, however, the proof is in the pudding clinically. I’d like to share the testimony of a 65-year-old female. This patient came to see me with significant degenerative disease of her cervical spine as well as degeneration in her eyes. She felt terrible and was battling fatigue. When she came to the clinic to receive her therapy, she was very nervous and almost backed out. Nonetheless, she went ahead with the therapy. Two weeks later, she calls the clinic and says, “I feel like I’m thirty years old...I’m out doing yard work. I’m digging holes. I just can’t stop moving. I have so much energy. Thank you.”

Dr. Al Sears: “Stem cells are your reserve of ‘replacement cells.’ Your body can use them to replace any kind of cell that is damaged, old, or dying. They can morph into any kind of cell you need, including those for your eyes, muscles, skin, or blood. They also allow your body to regenerate damaged tissue in any organ—from your brain to your heart to your liver. As you age, your stem cells don’t repair and regenerate as well as they once did. Fatigue sets in and can lead to poor regeneration or even degeneration of certain organs and tissues.”

Dr. Jon Young: “I had four meniscal tears, osteoarthritis, and my knee was bone on bone. I was facing surgery as my only viable option. When I heard about the stem cell therapy, I knew I had nothing to lose. In a few weeks, my knee was transformed. My MRI revealed that the tears were repaired, and my knee was rebuilt. I reviewed the science and was amazed at what I found. The research is valid, and I now have the most effective resource to help my patients get well and stay well. I have worked with hundreds of patients who have benefited from human umbilical cord stem cell therapy. We now actually have the ability to regenerate and repair the problem.”

Dr. Darcy Brunk: “Stem cells have changed the face of my practice. People who were coming in regularly just to manage their pain are now regenerating. They are finding the miracle of motion and gaining back what they thought was lost.” Not only have my patients experienced the power of stem cell therapy, I have as well. In fact, I tried it first. I was in an automobile accident where I was rear-ended at 70 miles an hour. I herniated two discs in my mid-back and two discs in my neck. It was a near career-ending injury for me. I had so much pain during the day that I could hardly make it through my patient schedule. I used steroids and medications in an attempt to cover up the pain. Fortunately, I discovered Infiniti Stem Cell Therapy. I had a simple injection in my back on either side of the muscle near the herniation, and then some in an IV. Two months after the therapy, I felt a shift in my back and my pain went away! I now do what I refer to as “wellness therapies” every six months. Since my family has a history of cardiovascular issues, I want to stay ahead of the natural process of degeneration. I noticed recently that the varicose veins that I have had for many years are gone. My personal experience and the clinical evidence of my patients’ regenerative journeys has opened my mind to the reality of the power of the body to heal. Join the healing revolution.”

Leila Brogstedte, MSN, RN, APRN-BC: “I have been involved with stem cells for several years. I became interested in stem cells when researching answers for my Mom's complex medical needs. Mom was a fairly healthy 68-year-old woman who had an unexplained stroke, that left her with intractable seizures and neurological lupus. She has had 3 rounds of stem cells over the last year with amazing results. She is emotionally stable and physically stronger. Her peripheral awareness has increased and the use of her right side has improved. As a bonus, she is off of two of her three seizure medications.”

Jenny Hrbacek, RN: “For the last two years, my hip ached day and night. In the last year, it began hurting so bad that I would wake up in the middle of the night from the pain. I feared that I would need a hip replacement like so many of my friends. When I found out about stem cells and learned about their amazing regenerative power, I knew that this was the therapy for me. Ninety days after the therapy, I was sleeping through the night, and had no more pain. It has been another 2 years and I remain pain free. “I saw that my brother was suffering silently with his chronic pain. When he told me that he was going to have shoulder surgery because of the constant pain and weakness in his arm, I knew that he was a candidate for stem cell therapy. Three months after his therapy, he is doing push-ups, sit-ups, and curls.” He says, “I have a new shoulder.” Dr. Ben Johnson: “I’ve seen it happen with my own eyes. There is virtually nothing that your body can’t regenerate with a little help from umbilical stem cells. When it comes to dealing with inflammation – it calms the waters of the sea. Where you had white caps yesterday, you’ve got smooth water today. Join the Regeneration Revolution! It’s amazing!”

Dr. Sammy Hardin: “The regenerative power of Stem Cell Therapy has made a significant transformation in the lives of my patients and family. My patients are seeing resolution of everything from aches and pains to chronic situations that seemed hopeless. I’d like to share with you benefits that my parents received. From the time when my mother completed chemotherapy and radiation for cancer about 15 years ago, she has suffered with a long list of ailments. Since her Stem Cell Therapy, she is no longer on her medication for her bladder control problem and her G.I. problems have gone away. My dad, who is in his 80’s, had been suffering with hip pain. After therapy, the hip pain was gone and so was the constant joint pain in his hands. They, like me, are thrilled.”

Dr. Kyon Hood: “Not only is Stem Cell Therapy making a significant impact on my patient’s health, it has transformed my health as well. Nerve pain from a knee injury significantly impacted my ability to do every day things, including playing with my toddler son. The slightest touch would send a sharp pain shooting down my leg. Within a couple months of receiving Stem Cell Therapy, the pain completely disappeared, and I’ve been pain free ever since. My family members have benefited tremendously as well. My aunt not only had knee pain improve after therapy, the pain in her neck and back from herniated discs also improved significantly. She no longer uses a cane to get around and can care for her grandchildren without debilitating pain. What Stem Cell Therapy has done for myself, my patients, and my family, it can do for you!”

Dr. Liza Leal: “I’m a board-certified family practitioner. I’m also certified in pain management and addiction medicine. I want to share a little bit about what Stem Cell Therapy has done for my patients, many whom have dealt with long-term pain, chronic inflammation, and immune dysfunction. It is a privilege to watch the stem cells decrease inflammation and modulate their immune systems, effectively halting and reversing the processes that caused so many of their degenerative conditions and diseases. The ability to change people’s lives every day, one smile at a time, is why I chose to offer regenerative therapies. It has taken patient care at my office to a new level! I’d also like to share with you what Stem Cell Therapy has done for me. When I was twenty-three years old, I was diagnosed with rheumatoid arthritis. Within just a few months, I began a difficult four years in a wheelchair. During that time, I went through kidney and liver dysfunction and almost lost my life. Until I found Stem Cell Therapy, I could only manage my symptoms and pain. I am excited and astounded to be able to share that today, at the age of fifty, I live pain free!”

Lacie Chambers: “I am most excited about stem cells for what they can do for our patients. We have had great results. One patient with trigeminal neuralgia had undergone an unsuccessful Gamma Knife Surgery. She was looking for other options and decided to try Stem Cell Therapy. When she came back for her follow up the next week, she was able to get out of her wheelchair and walk with a smile on her face. It was very exciting.”
